NO

This was a small log building two bays square and two stories in height which probably had an A-roof. (The roof is now completely gone.) This log dwelling was built into a slightly larger frames structure. The logs are square and laid in a grooved construction pattern, one on top of another. Many adze marks show on their surfaces. They are chinked between with plaster and fragments on broken brick.

This structure is important even in its ruinous state as one of the few surviving log structures in this county. Its site should be noted since it seems to be beyond repair. It is also interesting because it is two stories in height even though it is such a tiny structure.
